A Drug-free Depression Treatment That Works for You

TMS helps life become manageable again.

Depression Starts in the Brain

Depressed Brain

Non-Depressed Brain

Depression is caused by reduced activity in the areas of the brain thought to regulate mood.

A PET scan measures vital functions such as blood flow, oxygen use, and blood sugar (glucose) metabolism.

More Medication Isn't Always the Answer

Studies show that your chance of remission goes down with each new medication you need. In a large study of pharmaceutical treatments for depression, patients who tried 4 medications had just a 7% rate of remission.

TMS Is an Advanced Way to Treat Depression

TMS is like physical therapy for the brain. It uses magnetic pulses, similar in strength to MRI, to reignite dormant connections in the brain and give you control of your depression.

TMS has **0 common systemic side effects**, allowing you to live life to the fullest.

TMS is covered by Medicare and most national insurance carriers.

More About TMS

TMS is a noninvasive, outpatient treatment that takes **as little as 19 minutes per day**.

You may feel a tapping, tingling, or warming sensation where the coil is positioned. This is temporary and typically subsides with subsequent treatments.

You will be awake and alert during the treatment and may resume regular activities immediately afterward.
